

# India Glycols (IGL): “We believe in green”

## A strong strategic vision

With the emphasis now increasingly shifting to green manufacturing, [India Glycols Limited](#) aims at meeting industry’s need for environmentally responsible products and production techniques.

## The Challenge

The reputational damage flowing from the 1984 Bhopal disaster when a gas leak at Union Carbide’s plant in Bhopal killed more than 2 259 people, still haunts the chemical sector

Anticipating the global markets’ requirements to defend the company’s position as a leading manufacturer of sustainable products.

## The Process

Supported by a strong strategic vision for sustainability, India Glycols Limited relies on green, innovative technologies to differentiate from competitors and foster exports. An enhanced life cycle approach, developed with the support of the UNEP / SETAC Life Cycle Initiative, plays an essential part in this strategy to keep ahead of global markets.

Assess existing life cycle practices, improve capacity, and identify new business opportunities.

Today IGL is the only green petrochemical company of its kind in the world, manufacturing chemicals, natural gums, spirits, and industrial gases using green technology. Their entire range of petro-chemicals and related products is manufactured through the application of green based agro technology.

## The Result

IGL continuously takes new initiatives to improve sustainability, with special focus on energy usage, carbon emissions, and Life Cycle Management of its products.

Better-informed decision-making supporting the R&D strategy, better preparation for standards & exports, and award fostering the company’s reputation for sustainability

This customer-oriented purpose embodies in the vision of the company, “to be one of the most respected and innovative manufacturers of internationally sustainable products”.
